

Care room furniture, Chorea-Huntington and special beds

for seniors, heavyweight and
Chorea-Huntington patients

With our care bed and furniture programme, we equip care facilities ready for occupancy.

In 1995, SAVI started in the care bed sector and established itself as a renowned manufacturer within a few years. Our philosophy is also the benchmark for expectations and wishes for a good bed in other areas of life. SAVI beds are designed to make people happier. You sleep safely and healthily, the care is conceivably comfortable and, on top of that, SAVI beds look strikingly beautiful.

This is now also standard for our care bed and furniture programme.

Together with individual advice and a wide range of options, the result is a customised solution that is not infrequently unique: a care room that is 100 % tailored to the customer's needs.

However, all furniture has something else in common: the many years of experience gained from working closely with facilities such as retirement homes, clinics and families.

“ What particularly pleases me, as well
as our assisted living residents?
It’s nice when functional things
retain a homely character. ”

Chorea-Huntington beds - for a safe sleep

Our nursing beds for Huntington's disease patients feature special padded bed sides. The fixed padding offers the patient effective protection against injury from uncontrolled movements.

The most appropriate bed-side height and padding type (incl. padded edges) must be selected to ensure that the patient remains in his/her bed during the night and gets enough sleep. An electrically adjustable slatted bed base provides greater comfort for patients who have to spend lengthy periods in bed.

- prevention of injuries
(positive side effect: no medical costs)
- the bed sides ensure that the patient stays in bed during the night
- the patient gets the necessary sleep

ChoReha (a)

Our ChoReha beds are characterized by the approx. 7 cm thick, firmly integrated padding in a particularly stable construction. Together with the solid side surround, this results in an approx. 10 cm thick, very stable surround. Even disinfection in the hospital area is no problem here.

- side rail height: 40 cm
- padding height: 40 cm
- lying height electrically adjustable: 41 – 76 cm
- wood colour free to choose
- four-wing folding door
- 4-castor running gear
- optional: underbody lighting, central locking device
